

playCONNECT Product Manager

Home Assignment

Purpose

We want to assess how a candidate would approach building and scaling the playCONNECT platform to support multiple stakeholder groups: casino games, sweepstakes, casual games, marketing and reward teams across a complex and global ecosystem.

This assignment is designed to understand how you approach product strategy, discovery, execution and stakeholders alignment in a complex environment. We don't expect you to have perfect information — instead, show us how you structure your thinking, communicate priorities, and balance product and technical concerns. Spend **no more than 4 hours**; go broad and focus where you feel strongest.

Context

The playCONNECT platform is comprised of several backend systems, web management consoles, and a client-side SDK integrated across our games applications:

- **SDK:** A client-side layer to handle authentication, events tracking, content delivery between game apps and our backend systems
- **AVA:** content management system to profile players and serve game configs.
- **playOps:** A web console to operate live game events and configs
- **Coupon:** A specialised engine to generate digital promo code for redemption in our games.
- **Robinhood:** A specialised engine to generate awarding requests in our games.

Brief

For this assignment, playCONNECT wants to capitalize on our multi-game portfolio by introducing a **Cross-Game Promotion System**. Marketing and Game teams should have the ability to set up a new campaign via our platform services to deliver an in-game challenge to our players to receive rewards.

Example, "when a player achieves Level 20 in Pop! Slots, automatically grant them a customized coupon of 10K free play chips to redeem in Konami, and log the action in their central loyalty ledger"

Currently, our 4 core products (MyVegas, POP!, MGM, Konami) operate independently with localized data pipelines and manual config handoffs. This requires engineering intervention for every new cross-game campaign execution, lengthening time-to-market and increasing operational risk.

Your task is to define the product vision, specification and rollout strategy involving the various capabilities of playCONNECT platform (SDK, AVA, playOps, Coupon, Robinhood or any new functionalities) into a unified, self-service automated engine.

Deliverable

Prepare a Google Slides Deck (max 12 slides) or PDF (max 3 pages) that answers the following:

1. Problem Framing & Strategic Insight

- **Stakeholder Matrix:** Map out how you will structure your discovery process to gather requirements and operational constraints from the Marketing and various Game teams.
- **Product Alignment:** Explain how you will utilise the different products within the playCONNECT suite (as provided in Context) to design the feature and also validate technical assumptions early?

2. Product Design

- **System Blueprint:** Build a high level architecture and map the key data/user flows through the playCONNECT systems and game application.
- **Core Requirements/Epics:** Write 5 to 8 high-level epics with clear acceptance criteria. Ensure to cover modularization, APIs, self-service tooling and SDK requirements to make this scalable.

3. Project Planning

- **Phased Roadmap (MVP to Scale):** How do you phase this delivery over the next 3-6 months? What does a minimal viable product look like to deliver immediate business value?
- **Success Metrics:** Define 2 Business Impact Metrics for your stakeholders and 2 Quantitative Metrics for platform performance and how they will be monitored
- **Rollout and Communication Plan:** Detailed steps and deliverables for all core business stakeholders (LiveOps, BI/Data, Customer Support) to be fully onboarded and ready for release.
- **Risks & Mitigation:** Identify 3 top risks (technical, organizational, operational) and how you will proactively address them.

You are free to make any realistic data, architecture, or resource assumptions needed to complete the assignment—just make sure to state them explicitly in your documentation. Good luck!
